

In 2003, the prestigious journal *Nature* reported on the discovery of PQQ — the first new vitamin discovered since 1948. Unlike any of the other 13 known vitamins, PQQ has specific benefits for the mitochondria — the “power plants” of the cell which generates the energy that powers all human activity.

Scientific evidence suggests that mitochondrial damage is one of the main causes of aging. In vivo research indicates that PQQ provides significant protection to the mitochondria. This action may help:

- Slow the aging process*
- Protect nerve cells*
- Boost energy levels*
- Improve mental focus and performance*

Manufactured using a patented process, VitaPQQ is the first dietary supplement ever to feature PQQ. Notification of PQQ as a New Dietary Ingredient has been accepted by the FDA. In 2010, VitaPQQ was recognized by the highly prestigious Nutracon “Best New Finished Product of the Year” award.
